Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: A, B and C in Fig. 5A and C and D in Fig. 5B. 2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the programmable control engine that has been programmed using a control line to enable latching of a command into a microcode program controller as recited in claim 17 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2818

4. Claims 1-33 are rejected under 35 U.S.C. 102(e) as being anticipated by Kreifels et al., 6,418,059.

Kreifels et al., 6,418,059, discloses in Figs. 1-4 a memory system comprising:

radio transceiver 104;

microprocessor 102, for providing parallel program load number control signals 250 (see lines 29-37, column 4);

display 106,

input device 108;

multi-level non-volatile flash EEPROM array 100;

charge pump 405 having an electrical current capability (see lines 52-53, column 1) and generating program pulse voltages (line 3, page 9);

bit sequence programming controller 200, including microcode program controller 401 (see lines 36-50, column 5), for programming a varying number of non-volatile memory cells (bit width/bandwidth) in parallel together (more or fewer cells/bits) based on the electrical current capability of charge pump 405 (see lines 49-57, column 1; lines 51-67, column 2) by pulsing and re-pulsing any desired group of memory cells of any size as necessary to be programmed and verify programming as shown in Fig. 6;

wherein:

microprocessor 102 can inherently include a programmable control engine for latching a command to microcode program controller 401 (as claims 17 and 23) as well known in the art.
